WILLARDS, MARYLAND

Strawberry Plants And All Other Small Fruits

Spring 1960 Fall

Telephone TEMple 5-2083

Dear Farmers and Friends:

It is again getting time to think of your spring farming. We have done a good job of growing our Nursery stock with the good growing season and the help of the Federal and State authorities.

We start each and every year with new plants right out of the screen house and the plants are planted on an isolated farm treated with Nemagon and dusted every two weeks, which makes these plants as close to being free of Virus as possible.

When growing digging and shipping we are thinking of our customers now and for future customers. We use wire bound crates and plastic bags for shipping, which makes the shipping charge cheaper. We have given approximate weight and cost on postal rates page 20.

If too much money is sent it will be returned to you.

It is our aim to do everything possible to make our customers satisfied with our plants and service.

PREMIER (Virus-Free)

PREMIER is nationally known. It has been considered the leading strawberry from coast to coast. For the past few years it has lost some of its popularity due to virus. Virus-Free Premier will now make vigorous beds and produce a heavy crop somewhat different from old-fashioned Premier.

BLAKEMORE (Virus-Free)

Virus-Free Blakemore is one of the earliest varieties. It will make a tremendous bed and produce a heavy crop over a long picking season without the berries running down in size. Virus-Free Blakemore is resistant to the yellows commonly found in this variety.

ROBINSON (Virus-Free)

The Robinson berry has been very successful in places where Premier grows. Makes a good fruiting bed in most any type of soil. It grows a sparkling red berry with a green cap and really looks like a strawberry should. It is as great a berry as could be described, but we don't see any use in giving it so many names. Some companies call it Scarlet Beauty and Kardinal King. Its true name is Robinson and that is the only official name it has.

FAIRLAND

The Fairland berry is a bright red berry medium in size. The plant growth is not as vigorous as the virus free varieties.

The Fairland has been a wonderful berry in it's day. Since the Surecrop and Red Glow have been named they have practically replaced Fairland. It is resistant to one strain of Red Steele.

EMPIRE (Virus-Free)

A new berry introduced by the Geneva Experimental Station in New York. It is a cross of the Dresden and Sparkle, and was released in 1950. It makes a nice picking bed of husky plants. The berry is a little more firm than Premier and a much better shipper. It ripens a few days later than Premier. Empire is one of the leading varieties in N. Y. state.

ARMORE (Virus-Free)

The Armore was introduced by the Missouri experiment station. It is a firm, good shipping, and good eating berry. It is very uniform in shape and has a bright red color. Armore has proven more productive than sixty others in actual growing tests.

TENNESSEE BEAUTY (Virus-Free)

The Tennessee Beauty was introduced by the State of Tennessee in 1942 and has gained more popularity each year. It produces a berry larger than the Blakemore with an extra large dark green cap. The berry is bright red and will not turn dark when over-ripe.

SPARKLE (Virus-Free)

The Virus-Free Sparkle is an improvement over the original Sparkle in vigor as well as fruiting. It is considered a late berry, good for shipping and freezing. It does well where Premier, Catskill, and Robinson are grown. For a long picking season we recommend Dixieland, Catskill, Robinson, and Sparkle. RED-STELE RESISTANT.

TEMPLE

The berry is a bright red if picked every day, but if it is left until it is over-ripe it will turn very dark. The plant Growth is not as good as most of the virus free varieties. RED STEELE RESISTANT.

BIG JOE

A good midseason variety coming on a few days earlier than Sparkle and for this reason we recommend it to fill in the season.

VIRUS-FREE

We are carrying all Virus free varieties of Strawberry plants with the exception of three. Due to the demand it is still necessary to grow them. They are grown on another farm so there will be no insects contacting both fields.

These VIRUS-FREE plants are grown on farms that are isolated from any other strawberry plants within a mile. They have been dusted with Parathion dust at regular intervals to control the aphids that transmit the virus disease.

We have started with virus-free plants and have done all we can to keep them so. We are glad to have the opportunity to offer you these well cared for plants. It has proven out wonderful on such varieties as Premier and Catskill which had lost their vigor in growing plants and producing firm berries.

NEMATODE

We have had very little root nematode in our soil. This year we have applied Nemagon in two different applications as recommended by the University of Maryland Experimental Station. This has proven very satisfactory.

FAIRFAX (Virus-Free)

The queen of quality. Was introduced in 1932 and is another scientific cross of Royal Sovereign and Premier by the U. S. Department of Agriculture. We fruit it on our ideal strawberry soil and find it has the most delicious flavor of any berry we grow. We are not advising our customers to go back on the Premier which has been so dependable, but we do advise you to try our Fairfax in your planting.

ALBRITTON (Virus-Free)

The Albritton was originated at North Carolina experimental station with the cooperation of the U. S. D. A. The plants are just a nice size that will make you a beautiful bed of healthy plants, and with these healthy plants you will have a lot of light red firm berries which will make a good berry for shipping.

CLAIMS

All claims for stock received not as represented should be reported promptly. We cannot entertain claims made after stock has been accepted in good faith, or when a report is not made in some form within a period of 15 days after arrival of stock.

The above picture shows how everbearing Strawberries are often grown in the hill system.

GEM and SUPERFECTION (Everbearing) (Virus-Free)

The Gem and Perfection prove to be the same berry. The berries are light red in color and slightly tart. The plant growth is fairly vigorous if you let them make a bed. They also do well in hill system as shown above.

STREAMLINER (Everbearing) (Virus-Free)

The Streamliner is a very red berry pointed in shape with a good cap. A good berry for the near-by market. It is also grown in the hill system.

No. 1
Sure Crop Robinson
Premier Pocahontas
Superfection
25 plants of each
Special \$5.50

Order these garden
orders by numbers.
Each of these garden
orders are selected
Early, Midseason, Late,
and Everbearing.

No. 2
Premier Catskill
Empire Sparkle
Streamliner
50 plants of each
Special \$9.00

CATSKILL (Virus-Free)

Catskill is another old variety that has also lost some of its popularity due to virus. With Richardson's virus-free Catskill, the plants will make a tremendous bed and produce a large crop of extra large berries. Catskill can be grown wherever Premier has grown and fruit just a few days after the Premier. It is considered one of the leading varieties.

New Recommended Varieties

EARLIDAWN (Virus-Free)

The earliest of all varieties, it ripens a few days ahead of Premier and more resistant to frost than Premier. The berries are large, light red in color. It has a tart taste which makes a good long distance shipping variety. Supply is still limited.

POCAHONTAS

(Virus-Free)

Pocahontas is a cross between Tennessee Shipper and Midland. It makes a nice bed of plants and will also produce a heavy crop of large size berries. The Pocahontas is bright red in color and has tough skin which makes it a fine berry for shipping. Ripens a little later than Blakemore.

DIXIELAND

(Virus-Free)

Dixieland is another cross between Tenn. Shipper and Midland named in 1953. It ripens along with the Blakemore, is larger in size, and more red in color. Very firm, uniform in size and acid, which makes a good shipping berry. The plants are vigorous and produce a nice bed of plants.

New Recommended Varieties

RED GLOW (Virus-Free)

The Berries are a bright red color, even the inside flesh. Also a nice green cap that really sets it off for a good market. It is an early berry ready for the good early market. A new Berry that should be tried in your soils. RED STEELE RESISTANT.

VERMILION (Virus-Free)

Vermillion is a new strawberry introduced by the University of Illinois. Its parenthood is a cross between the Red Star and Pathfinder. **NO RED-STELE ROOT ROT HAS BEEN FOUND IN THE ROOTS OF THE PLANTS GROWN IN INFESTED RED STELE AREAS.** The foliage seems resistant to leaf spot, leaf blight, and leaf scorch. The leaves are very dark green. The berries are medium to large in size, very attractive and evenly colored.

SURECROP (Virus-Free)

Surecrop has a very bright red berry. It is one of the best Midseason berries for home use, freezing and shipping of all the Red Steele Resistant varieties. It has proven good as far as Ohio, W. Va., Pa. and all of the New England States. **RESISTANT TO THREE KNOWN STRAINS OF RED STEELE.**

MIDLAND (Virus-Free)

The Midland is a wonderful berry. It is in the class with any of the berries. The plants are big and strong and make a medium bed of plants. The berry is a very large cone shaped berry that really sparkles and has a large green cap. When in a crate it is decorated with red and green and really looks like healthy strawberries. It will give the grower the thrill of knowing that he has done what he was trying to do.

RED STAR (Virus-Free)

Red Star is a late, late berry. We recommend it to be grown where there is sufficient moisture or irrigation. If grown under these conditions you will have a nice lot of berries after other varieties are gone and forgotten. The blossoms come so late that they are considered frost proof.

HIGH LIGHTS ON GROWING STRAWBERRIES AND OTHER SMALL FRUITS

STRAWBERRIES

We will start at the beginning on growing strawberries which is important. We recommend planting rye in the early fall before you put strawberry plants in the spring. After the rye has gotten started good, broad-cast 500 pounds of 10-10-10 fertilizer per acre, then let the rye grow until it gets about knee-high then plow it under and work the soil until it is all cut up.

You can make up your rows from 3½ to 4 feet apart and set the plants 14 to 18 inches apart down the row. You may side-dress with a 5-10-5 fertilizer in the middle of the summer if they are on poor soil, but usually with rye and fertilizer broad-cast it will supply the plant with the necessary plant food already digested.

We recommend top dressing strawberries in August instead of the early spring for this reason. When fertilized in the spring you only get the use of the nitrogen which will give you a lot of top growth. If the fertilizer is applied in August all of the available plant food is taken up and stored into the crown ready to produce you a big crop the next year.

ASPARAGUS

The first step will be to plow your soil and work it up like you would a garden, then dig or plow a trench 12 to 18 inches deep and 10 to 12 inches wide. If you have some well rotted manure you can put that into the trench along with a little lime and 500 pounds per acre of 5-10-5 fertilizer and mix with the soil. Set 2 year old crowns in the trench about 18 inches apart and cover with two or three inches of soil.

As the plants grow gradually work the soil in around them until the land is level. Keep the weeds and grass down, but don't cut the spears the first year. It is even better to wait two years. The first year you cut the spears only cut from three to five weeks, and after that you may cut them until the 4th of July.

RASPBERRIES (Red)

There are two methods used in growing red Raspberries. The first is the hill system, and they are set 5 feet apart down the row and the rows 5 feet apart. This way you can cultivate both ways. Another way is to set the plants 3 feet apart down the row and the rows 6 feet apart. After the plants are set cut all canes off 2 or 3 inches above the ground. After fruiting season cut all fruiting canes and burn each year.

Black Raspberries are either set 6 feet apart each way or 3 feet apart down the row with rows 7 feet apart. After planting cut all canes off 2 or 3 in. above the ground. When the new growth is about 2 ft. high pinch off the tips of the canes and they will branch out which will increase your crop. The following spring before growth starts prune canes back to about 2 or 3 feet and the canes are taken out entirely.

In dry climates mulching has helped to hold the moisture and keep down the weeds.

BLACKBERRIES

Blackberries should be planted 4 feet apart down the row with rows 7 ft. apart. Put the roots in a furrow or trench about 6 in. square and after the roots have been covered with soil firmly cut the canes off a couple in. above the ground. After they have grown the first year cut one third of the growth off in the early spring. Only allow 6 to 8 canes to grow. A sawdust mulch works very well also.

GRAPES

Grapes are planted 8 feet apart down the row with rows 10 ft. apart then you may put up 2 wires to train the laterals to run on so they will be off the ground and at the right height to pick. You should leave 4 laterals on each plant and on each lateral prune back so that there will be from 5 to 7 fruit buds on each. For 1 or 2 plants you may put up 4 poles and few across the top and train the laterals up and over the top. Now as far as the spraying this should be taken up with your local County agent so that you will spray at the right time if necessary.

STRAWBERRY PLANT PRICE LIST ON PAGE 23

ASPARAGUS

Asparagus is the first vegetable to come in the spring. You can have spears to cut from March or April until July for 20 years. If your garden space is limited you can plant enough Asparagus for your family along the borders of your garden. Asparagus can be grown in most all well-drained soil. If your soil is rich or made rich it will produce larger and more tender spears. The spears should not be cut the first year, cut some the second year, but the third year you may cut the spears as you desire. The deeper the roots are planted the longer the bed will last. The roots work towards the top of the soil each year.

MARY WASHINGTON

Mary Washington asparagus has been so satisfactory that other varieties are practically forgotten. We want to mention that the Mary Washington stock comes out of the ground plumb straight. When you go to bunch them they lay in the form straight as pencils.

ASPARAGUS PRICE LIST

TO SAVE YOU MONEY.

CURRENTS

WILDER (Midseason). A popular bright red currant planted extensively in the Northeastern States by commercial grower. The plant produces a lot of fruit which brings you a nice profit for the season.

RED LAKE (Late). Another large light red currant which is becoming very popular for all sections. The berries are large and firm.

Currant Price List

1 to 9 — \$.90 each

10 to 49 — \$.80 each

GOOSEBERRIES

DOWNING. This is the most popular variety of the American sort. The fruit is large pale green and seldom bothered with mildew.

POORMAN. A very popular variety in New York State although very popular throughout the country.

Gooseberry Price List

1 to 9 — \$1.25 each — 2 yr. No. 1

10 to 49 — \$1.00 each

EBONY KING BLACKBERRIES

A new upright blackberry guaranteed to bear. Most of the old blackberry varieties will produce blossoms but no fruit. It is what the old blackberry should have been. The supply of these plants is very limited.

6 plants 1 yr. No. 1 — \$3.60
25 plants 1 yr. No. 1 — \$8.25

12 plants 1 yr. No. 1 — \$5.25
50 plants 1 yr. No. 1 — \$14.25

BAILEY BLACKBERRIES

Another new blackberry. The plant is tall, vigorous, upright, fancy and productive. The fruit is uniformly large and maintains size throughout the season.

6 plants 1 yr. No. 1 — \$3.60
25 plants 1 yr. No. 1 — \$8.25

12 plants 1 yr. No. 1 — \$5.25
50 plants 1 yr. No. 1 — \$14.25

**OUR MOTTO IS TO GO ON AND ON AND ON WITH THE SAME
BUSINESS PRINCIPLES WHICH HAVE MADE THIS BUSI-
NESS A GREAT BUSINESS THAT WE ARE SO PROUD OF.**

The above picture shows what blueberries will do for you in six years. It is the most beautiful crop of fruit ever grown.

BLUEBERRIES

Blueberries are becoming more popular each year. So far, the supply has not been ample enough to take care of the demand. Blueberries are grown from North Carolina to Maine. They can be grown wherever the temperature doesn't get 10 degrees below zero without any injury. It is one of the easiest crops to farm per acre with plants 4 feet apart down the row and rows 8 or 10 feet apart. They are usually cultivated with a small disc. If you don't have a lot to put them in you can always have a couple or more in your yard or a hedge down the side of your lawn for the novelty as well as the fruit. You cannot realize the beauty of Blueberries growing until you have grown some yourself. Some Blueberries grow larger than a nickel and almost as large as a quarter.

WEYMOUTH

The earliest blueberry, vigor growing bush, has beautiful foliage, fruit is round, dark blue firm berry. Excellent for canning and freezing.

EARLIBLUE

Earliblue is a cross between Stanlay and Weymouth. The berries are a light blue, firm, with a good flavor. It ripens along with the Weymouth and works very well to be planted together. Easy to prune.

RANCOCAS

A big rugged bush shoulder high. It is dependable in production, in qualities, style, and beauty. We wish to say it will give a lot of pleasure and profit and no trouble to grow.

DIXIE

The largest blueberry ever introduced. They are larger than a nickel. You can't doubt it as we have plenty of proof. Not as extensively planted as Rancocas, Weymouth and Jersey.

BERKELEY

A fine Midseason variety for home or commercial use. The plants grow very husky and produce a nice crop of light-blue berries. This variety is well suited for the New England states.

JERSEY

A late big blueberry. It is a good canning, freezing, and shipping berry. Really a general purpose berry. As an ornamental bush it has the style of any ornamental tree.

BLUEBERRY CULTURE

You should have two different varieties near each other, then they are both benefited through the blossom pollination.

The land should be damp, but well drained, with the plants set either 4 feet by 10 feet or 6 feet by 6 feet and remember that it is to bear fruit for 70 years or more. Blueberries will grow from North Carolina to Alaska. Any where huckleberries, Azaleas or Mountain Laurel grows so will blueberries. Don't use lime or stable manure, but if you do want to have the best blueberries in your community get leaves and rotted limbs from the swamp and put around the plant. This keeps weeds down and moisture up. The secret in growing them is to keep the ground worked often and shallow so that the air can penetrate into the soil.

This is one subject that we should be in a position to answer your questions about as we have the government test plot for our neighbor.

BLUEBERRY PRICE LIST

Raspberry Plants

RED RASPBERRIES

Latham

Latham seems to be the most popular. They look good when they get to market, yield a heavy crop, and stand long distance shipment well.

Indian Summer Everbearing

The Indian must get its name from the word Indian Summer as it delivers a spring crop, then grows a new set of canes & delivers another late autumn crop in Indian Summer.

Chief

A dark red raspberry like the Indian. It stands all kinds of weather & climate like an Indian Chief.

BLACK RASPBERRIES

Cumberland

An old dependable black variety. There may be a better variety but we have not learned of it.

MORRISON

A new black Raspberry with many high qualities and great disease resistant power. They are grown over practically all of the Northern States.

GRAPE VINES

CONCORD. An old reliable dark blue, mid-season grape. Has been grown for years on a commercial base. Other varieties have paid well some years, but the Concord is a grape that you can depend on for your bread & butter. It does well in most any kind of soil.

CACO. One of the new red mid-season grapes. Ripens a few days ahead of the Concord. It contains so much sugar it will preserve itself if left on the vine too long.

NIAGARA. One of the most outstanding white grapes. It could easily be called the white Concord by its qualities although it ripens a few days earlier than the Concord. There is no need to mention other white grapes as the Niagara is the king of all white grapes.

PRICES ON ALL VARIETIES OF GRAPE VINES

BOYSENBERRY

The Boysenberry grows more popular every year the more we learn about how wonderful it is in cans, how wonderful it is in the freezing unit, how easily it is grown, and the tremendous crops you can get. They average about 20 baskets of berries per plant second year after planting. Put the plants 6 feet apart.

POSTAL RATES AND INSTRUCTIONS TO CUSTOMERS

PAYMENT. Money order, Registered Letter, Bank Draft or Personal Check in full payment with order or $\frac{1}{4}$ cash with order and balance before date of shipment. We will book orders and wait a reasonable length of time for remittance.

GUARANTEE. That all orders will be delivered to the carriers in first class condition. All claims should be made promptly on receipt of goods and, if just, will be made satisfactory. If shipment has been delayed on the road and has spoiled, refuse same and notify us at once, or if you decide to accept same, have agent make notation on your receipt as to condition.

TRUE TO NAME. We use every precaution to have our plants true to name, and if any should prove otherwise we will replace them, but in no case will we be responsible for any sum greater than that paid for the plants.

YOU ARE TAKING NO RISK. We send just what you order or refund your money, unless you tell us to substitute your order with the nearest to it we have, should we be out of the varieties you order.

ALWAYS REMEMBER. We are at your service and will always be glad to hear from you and will give you any and every possible assistance.

POSTAL RATES. Your State shows your zone number. Column shows the rate of various plants. We return any postage not needed to ship your order.
